BRIEF INFORMATION ABOUT THE ACTIVITY

TOPIC/SUBJECT OF THE ACTIVITY	OC-DETECT
OBJECTIVES	This is a mobile health app designed to help create awareness about early detection of cancer
METHODOLOGY	The overall goal is to develop an mHealth platform called OC-DETECT using a user-centered design process to define and refine the platform's features and design based on feedback from discussions with various stakeholders (e.g., young people, individuals at risk of oral cancer or cancer survivors, family members of at-risk individuals or oral cancer survivors, physicians, nurses, and community health workers).
INVITED SPEAKERS WITH AFFILIATION DETAILS	Dr. Rajiv Tandon, Director Health, RTI International India Ms. Mariam Siddiqui, Sr. Public Health Researcher, RTI

(IF ANY)	International, India
OUTCOMES	The sessions were aimed at explaining to the students how they could participate in the exercise of identifying patients of oral cancer in early stages of the disease. They were introduced to the mHealth app and its features during the first interaction. On the following day, the students were gathered again to record whatever questions and suggestions they had regarding the app. The basic aim was that the student feedback would be useful in improving the app.

Innovation

OC-DETECT will provide a low-cost solution focused on improving education and providing family members with skills to support a home-based screening for early OC detection for at-risk individuals. Innovative components include:

- Simple mhealth screenings for early detection**
Delivered via mobile devices administered periodically by family members using a checklist screening instrument.
- Virtual visits to facilitate initial referrals**
Patients, family members, and HCPs will use OC-DETECT for an initial virtual visit.
- Proscribed images of the oral cavity**
Step-by-step guide for family members to take multiple images of the oral cavity. Images will be stitched together to create a virtual 3D image.
- RISK ASSESSMENT ALGORITHM**
Using an algorithm that incorporates the screening results in combination with the oral cavity photos, OC-DETECT will display a risk assessment (binary: low and high).

Study Design

Overall design: **Formative Phase**

Formative Research Objectives:
Understand our key stakeholders' perceptions, attitudes, intentions; factors affecting screening referrals; support mechanisms for individual health app, as well as perceived barriers.
