BRIEF INFORMATION ABOUT THE ACTIVITY

| TOPIC/SUBJECT OF THE ACTIVITY | Field Trip to Gurugram Haryana: Sultanpur National Park (All students of BSc (H) Biochemistry First Semester: 2023-24 Batch) |
|---|--|
| OBJECTIVES | Avian and other local Biodiversity Awareness Trip |
| METHODOLOGY | Field Trip |
| INVITED SPEAKERS WITH AFFLIATION DETAILS (IF ANY) | |
| OUTCOMES | Students visited the Sultanpur National Park on the outskirts of Gurugram, Haryana an ideal birding site as part of their academic curriculum to understand and learn about avian diversity of Sultanpur National Park. They learned about bird identification, bird habitat preferences, bird vocalization and also threats faced by the birds. Some other local Biodiversity was also observed and identified. |

Benefits for Students:

Traditional field trips are an important teaching tool. Field trips are the viable method of extending the traditional classroom environment to outdoors. We tested some of the biological and ecological theories discussed in class by introducing appropriate field research methods to students like acoustic identification.

Field experiences enhanced synthesis of information, cognitive reasoning ability, self-confidence, self-efficacy, and research collaboration skill among students. Being an important member of a research team, with significant contribution, elevated students' self-confidence and self-efficacy. Some of major benefits of this field trip include observing a natural setting first-hand, making learning more interesting and enjoyable, providing opportunities for students to gain field research experiences, learning through active participation (hands-on experience), and exploring practical or pressing biological and ecological issues onsite.

Students observed and appreciated the following naturally-occurring phenomena: The diversity and complexity of local and regional ecosystems, interaction among living organisms, interaction between organisms and their immediate environments, various stages of ecological succession, how individual organisms and populations respond to environmental stress, how communities respond to various types and intensities of disturbance, as well as why certain species can tolerate or recover from severe disturbance substantially more than others.

Through the principles and applications of ecology, biogeography, and conservation biology, students also witnessed why plant and animal species are distributed the way they are and learned why certain species should be protected by law as endangered and threatened species.
